Introduction:-

The Past Ten Years witnessed major changes in the geopolitical atlas in the World. New states have emerged while others collapsed. The Middle East Peace process which was initiated in Madrid in 1991 was intended to be a turning point in the history of the region. A new Geopolitical map for the middle East was supposed to be shaped in which all nations of the region will live in Peace and security and work together for bringing progress and prosperity to the entire region.

The production of a comprehensive Atlas for Palestine, defined here as the southern (Gaza Strip) and the Northern governorates (West Bank including East Jerusalem) has been a remarkable five years undertaking for ARIJ. This project has been attained despite numerous political and institutional obstacles. The Ever-changing political situation that exists

within the Palestinian areas was a major concern when faced with examining and predicting demographic conditions in the area.

This Atlas of Palestine is intended for those who wish to add their knowledge and understanding of Palestine, as well as for those who are able to appreciate the dedication with which this publication was produced.

We hope that the maps, the images and the explanations compiled within this work succeed in revealing the complex, remarkable and extraordinary features of a land known for its persistence and durability, but still struggling for its freedom and independence.
